

### Rotating Right Angle Assembly

Adjustable through 300°, the assembly locks into position with a thumb screw to guard against moving out of line by vibration or other means. It threads onto lenses from M46 on up by means of a Step Ring, or onto similar sized unthreaded lenses by using a Slip Mount.

- NOTES: 1. Rotating mount ring is black anodized aluminum.  
2. First-surface mirror mounted @ 45°.  
3. Step rings adapt the mount to lens filter threads with diameters of M46 and up.  
4. Not to scale. Dimensions in mm.
